Technology for Sustainable Development

GisAction, the best solution for a Sustainable Development

GIS Action aims to support the world of NGOs, International Associations and Organizations in dealing geographically with issues related to sustainable development. It uses cutting-edge GIS technology with the purpose to optimize the process of analysis, presentation, management and communication of sensitive data, making them faster, easier and intuitive.

Technology based on innovation

GisAction provides a multidisciplinary and integrated vision, enhancing geospatial technologies from GIS to Remote Sensing, having a 360 ° look of their panorama. Its main goal is to evaluate problems on different scales, on a physical and human level, trying to understand phenomena in their general and detailed trends, considering the human beings and the place.

Reasons to choose GisAction

Innovate your workflows and design the Geo Technology integration

Geodesign helps you in all phases of the Project: planning, decision-making, monitoring, dissemination. It makes planning and management of the projects more effective and participated.

Codesign is the best solution to easily manage all the information of the organization: data collection for processing, modification, maintenance, analysis and dissemination.

Capacity building and technology transfer.

Choose GIS & MAPPING, a geographic approach for integrated actions

The maps have a strong communicative power and give order and clarity to things. Maps and spatial analysis enable to discover and interpret patterns of mountains of data, allowing you a better knowledge of territory and stakeholders.

Assess your performance and enhance data and knowledge

International cooperation involves countless stakeholders and all of them generate information and data. How to enhance them? Use GIS for monitoring, measuring, sharing and giving value to data and projects, to guarantee transparency and enrich global information.

Communication and Advocacy

Telling stories effectively allows you to give voice to those who otherwise could never have the possibility to tell them. Employ story map applications to present rich stories, even very different from each other. This tool allows you to easily illustrate the territory and its features, empowering spatial visualisation.
